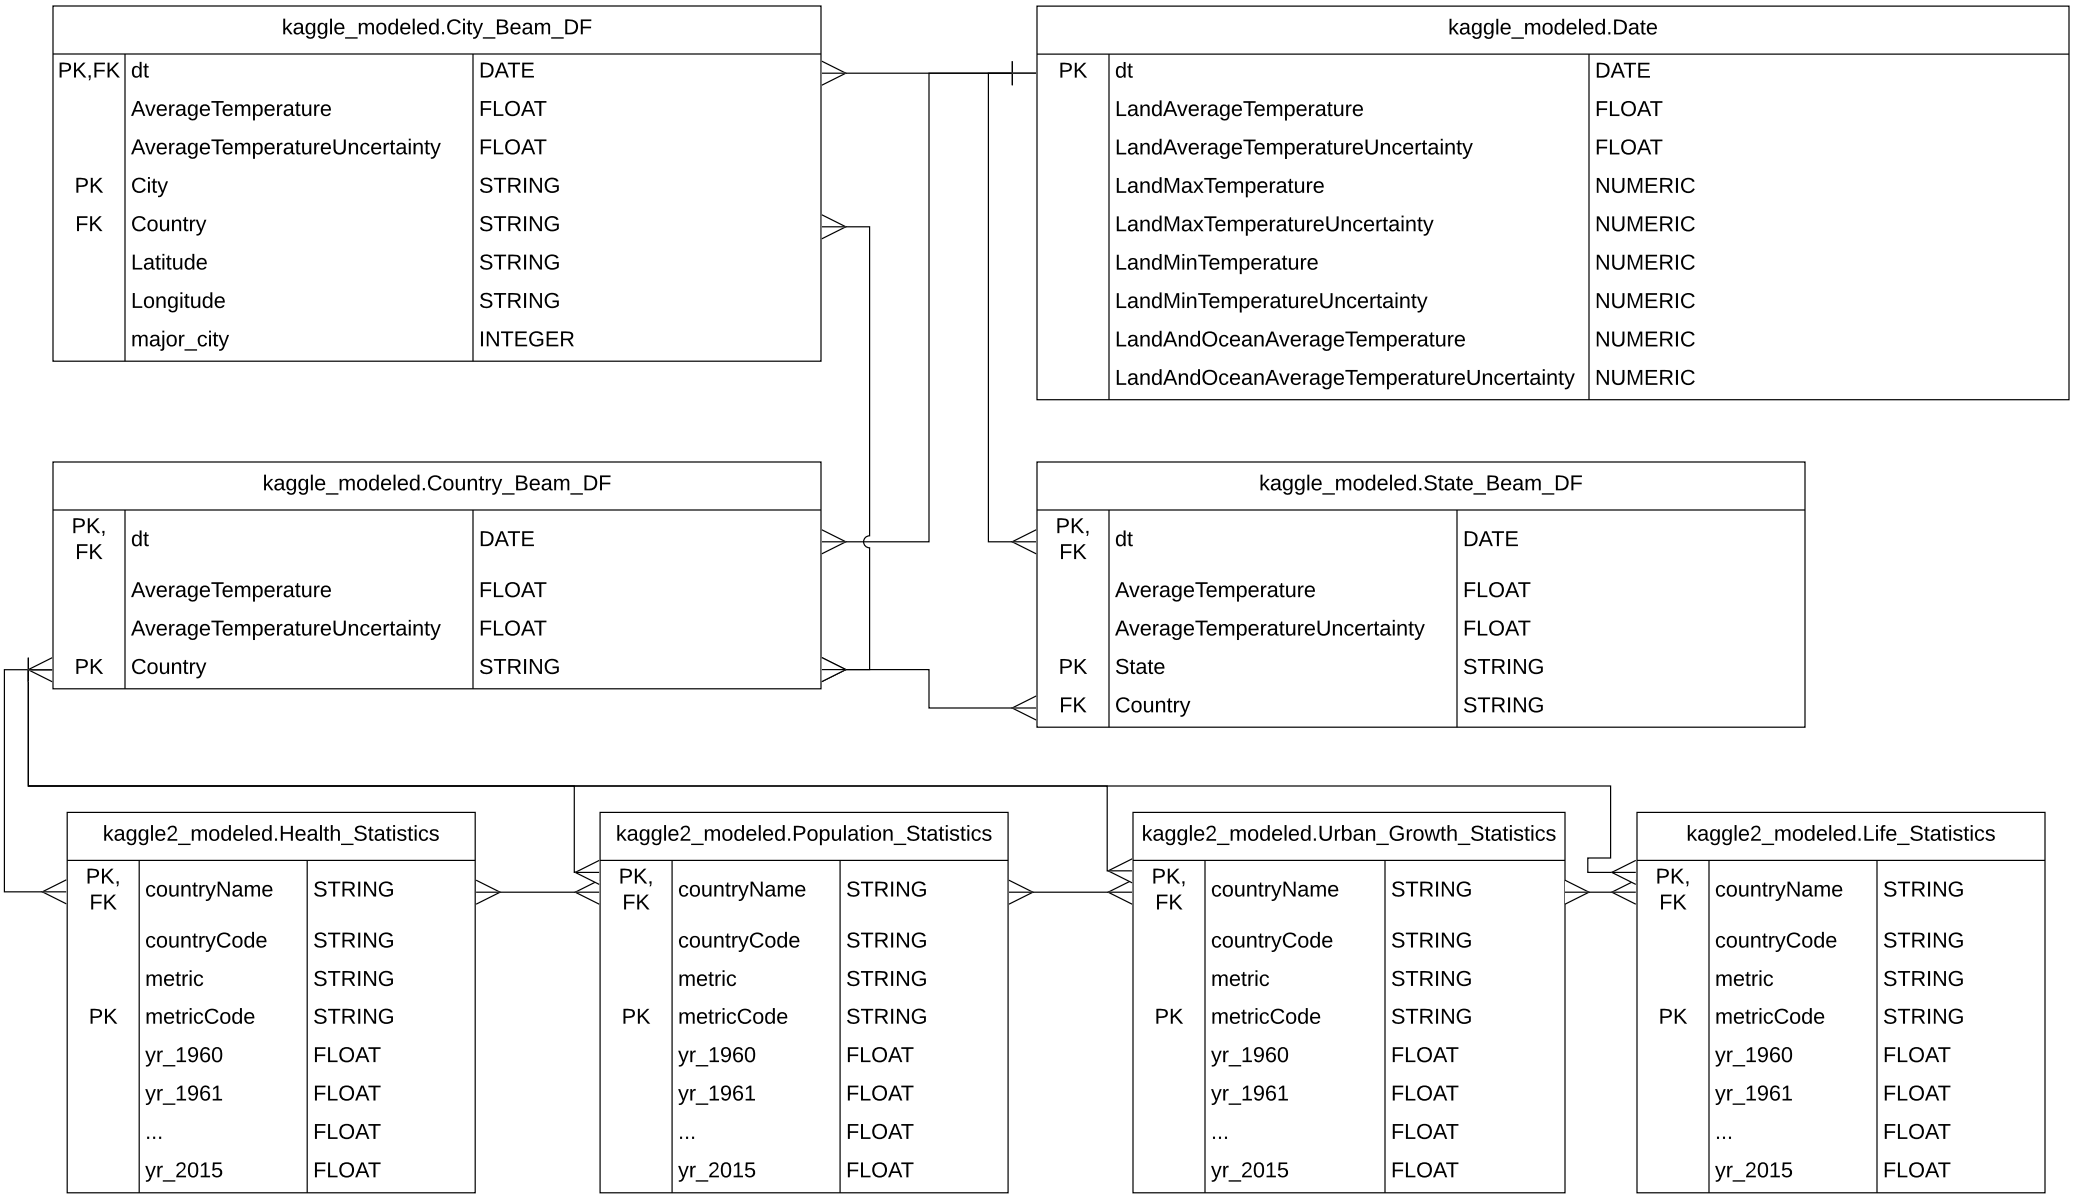
Global Temperatures Modeled ERD

Adnan Desai & Colin Phillips | CS 327E



NOTE: The Health_Statistics, Population_Statistics, Life_Statistics and Urban_Growth_Statistics tables all have the same attributes but all track different metrics. Given the nature of the input file, the attributes will be the same but the records will be significantly different. The key here is that they do not contain the same/similar data. The new tables should have a many to many relationship with the existing Country_Beam_DF table.
